Dear Parents,

A very busy half term coming up with Christmas Nativities and pantomimes but we will be also learning lots about materials. The children will name different materials and become mini scientists – completing lots of experiments testing the properties of those materials.

Miss Darlow

Our recommended read:

This half term we are learning all about materials. We will receive lots of books from the library service but this is a great one 'Everyday materials.'

I suggest if you want to have fun get the book '101 great science experiments' its super fun!

Monday- PE day- Wear your PE kit to school

Tuesday-Wednesday-

Thursday — PE day- Wear your PE kit to school & Reading book change day!

Friday- Family worship & Library day.

Things to remember:

Can you think of anything in your house made of wood?

What things in your house are opaque?

Can you think of anything in your house made of metal?

Can you find anything in your house that is transparent?

What materials can you find in your own home?

Autumn 2

wood

Wood is a natural material that comes from trees.

Metal

Metal is strong material and comes in many different forms and can be made into different things.

<u>Plastic</u>

Plastic is a man made material and there is a big movement to reduce the use of plastic.

<u>Useful words</u>

material- What something is made out of.

properties- The qualities of a material- what its like.

waterproof- repels water and keeps things dry.

absorbent- soaks water up.

transparent- you can see through it.

opaque- you can't see through it.

Environment- The world around us and animals habitats.

Fair test- When we are being scientists we need to make sure we conduct a fair test to make sure our findings are accurate.
